

Trawl Camera

Quick start guide

Wireless connectivity

The remote control unit is controlling the TrawlCamera units with radio signals. The system is able to switch between 8 different units. The units just need to be coded to operate in different channels. On the image to the left here, you can see the channel number as the last number in the serial number. In this case it is a channel 7 unit.

On / Scan

This will start the remote control. While it starts it is scanning the area nearby to find TrawlCamera units.

On / Off

This will start the camera inside the unit. When recording is done, you can click Off and take out the plug at the back of the unit.

Left

This is for controlling the volume of the left LED light. It has 4 options: low – 33% - 66% - 100%.

Switch Unit

If you have more than one TrawlCamera unit, this is used for switching between the units.

Record / Stop

When camera is ready, you can start recording. And remember to stop the camera when you are done recording.

Right

This is for controlling the volume of the right LED light. It has 4 options: low – 33% - 66% - 100%.

Trawl Camera

Congratulations on your new TrawlCamera system.
